

FIRST IN PORTABILITY...

Mini-Code Transmitter
Model 3060

Mini-Code Transmitter
Model 3083

Micro-Code Transmitter
Model 3070

Now, there are three garage door transmitters that can easily be carried in your pocket or purse, thanks to Stanley Electronics.

The Mini-Code 3083 can operate two independent garage doors or an automatic gate and garage door.

Each model provides 1,024 different codes, operates at a full distance range, and even has an LED that shows the condition of its 12-volt alkaline battery. You'll also find they come in handsome neutral colored cases, complete with a fine grain finish. The cases include a molded-in hole that can accept your keychain or ring with ease. If you prefer, the transmitters are furnished with a velcro strip for mounting on your dashboard or visor.

Lightweight, compact and powerful, Mini-Code and Micro-Code transmitters are backed by the same warranty as their full-sized cousins.

The Mini-Code Model 3060, Two Channel Model 3083 and Micro-Code Model 3070 can do everything bigger transmitters do – except they're ready to travel where you do.
